

## PAVE KINGSPORT

---

How many roads does Kingsport have? 499 miles worth!

Pave Kingsport is a sustainable paving plan that the city began work on in 2016. The first step of the plan was to evaluate all roads within city limits. Based on these evaluations, the City of Kingsport has developed a sustainable paving plan to get our roads back on track.

The average lifespan of a road should be between 20 and 25 years, but due to underfunding, Kingsport roads have typically gone 60 years without repaving. The city's sustainable paving plan will get that average back down to that 20-25 year cycle.

Smooth, well-paved roads are fundamental to any city, and poorly maintained ones pose safety risks and inhibit residents in their everyday lives. Kingsport is committed to maintaining its roads so citizens can get around the city easily and safely.
